

TIMELESS

SKIN SOLUTIONS

silkpeel dermalinfusion before & after treatment instructions

Before treatment:

Avoid any known skin irritants 1 week prior to treatment.

If you have an active cold sore you may want to postpone treatment. If you are prone to developing cold sores, contact our office at (614) 799-5100 and we will discuss the option of prescription prophylactic treatment.

Please inform our office if you are pregnant or nursing.

Avoid direct sun exposure without sun block protection for at least 3 days before treatment.

After treatment:

Following your treatment, you can immediately return to your normal activities.

Your skin will have a warm, pinkish glow that will usually fade in about 30 minutes, leaving your skin looking healthy and renewed. The moisture of the topical solution used during the dermalinfusion will leave your skin feeling cool and refreshed.

For the first 72 hours post treatment, your skin is more vulnerable to irritation and damage. You may find that you are sensitive to products that you usually use and tolerate well. If your skin feels more sensitive than usual, cleanse with a gentle, non-acidic cleanser.

If significant flaking occurs, please call our office at (614) 799-5100. Avoid pulling on flaking skin.

Makeup may be applied as long as the skin is not broken. If the skin is broken, apply antibiotic ointment and contact our office.

You should always wear an SPF of 15 or greater when exposed to any sunlight.

While you may see visible results after the first treatment, lasting and more significant results will be seen after 4-6 treatments spaced 7-10 days apart, supplemented by a recommended skin care regimen.

If you have any questions or concerns, please do not hesitate to call our office at (614) 799-5100 or email contact@timelessskinsolutions.com
